Justice organizations are looking for ways to provide secured access to multiple agency information systems with a single logon. The GFIPM initiative provides the justice community with a security and information sharing architecture that is based on an electronic justice credential. This standards-based justice credential can be used to securely connect law enforcement and public safety personnel to interagency applications and data over the Internet.

domain boundaries, such as the National Information Exchange Model (NIEM), the Information Sharing Environment, and the Law Enforcement Information Sharing Program.

Federated identity is part of Global's vision for promoting secure nationwide information sharing.

Building a Federation for Secure and Trusted Information Sharing

“**Federation**” is a fundamental concept in the GFIPM framework. The federation provides an agreed-upon framework for allowing agencies to directly provide services for trusted users whom they do not directly manage. A federation is a “group of two or more trusted partners with business and technical agreements that allow a user from one federation partner (participating agency A) to seamlessly access information resources from another federation partner (participating agency B) in a secure and trustworthy manner.” Major organizational participants in a federation vet and maintain information on the users they manage, and each federation partner retains control over the business rules for granting access to the sensitive information it owns. The federation partners establish the electronic trust needed to securely access information by sending standards-based justice credentials to federation partner information service(s). The federation partner information service(s) evaluate the justice credentials to determine whether to grant or deny access to the requested service or information.

Federation Benefits

User Convenience

Users can access multiple services using a common set of standardized security credentials, making it easier to sign on and access applications and to manage account information.

Interoperability

By specifying common security standards and framework, applications can adopt interoperable security specifications for authentication and authorization.

Cost-Effectiveness

GFIPM facilitates information sharing by using a standardized XML-based credential that includes information about each user's identity and privileges. This reduces the cost and complexity of identity administration required to access applications and vet users.

Privacy

GFIPM can reduce the propagation of personally identifiable information, reduce the redundant capture and storage of personal identity information, and depersonalize data exchanges across domains through the use of privacy metadata.

Security

A federation model can improve the security of local identity information and data in applications by providing a standardized approach to online identities between agencies or applications.

Global Advisory Committee Recommendation

In the past several years, federated identity deployments have grown, matured, and expanded in depth and breadth across multiple industries. As the standards have matured, more organizations are becoming aware of the compelling business case for building federated communities. As such, a critical objective of the Global Justice Information Sharing Initiative (Global) Security Working Group (GSWG), which oversees the GFIPM project, is to ensure compatibility by collaborating with other key ongoing projects within Global as well as those that cross

To this end, the Global Advisory Committee has made the following recommendations:

- ◆ Recognize GFIPM as the recommended approach for development of interoperable security functions in authentication and privilege management for information exchange among cross-domain justice information sharing systems.
- ◆ Urge the members of the justice community to consider GFIPM as a potential building block to a layered security solution when authenticating users among cross-domain organizations.

How can justice organizations share information with new partners while securely safeguarding data, maintaining privacy, reducing administrative burdens, and providing their users the ease of single sign-on?

One recommended solution is GFIPM. It represents a strategic change and dramatic improvement in the way justice organizations establish the trust relationships needed to share information. GFIPM provides a standardized justice credential to be used by members and partners of the justice community. This credential will allow more information to be shared in new and automated ways with reduced management burden and improved security and on a broader scale. GFIPM effectively breaks down the traditional barriers of stovepiped systems to better safeguard our nation.

GFIPM Framework

The **GFIPM** framework provides the justice community and partner organizations with a standards-based approach for implementing federated identity. Common use of these standards across federation systems is essential to their interoperability. Leveraging the Global Justice XML and NIEM, a standard set of XML-based elements and attributes (referred to collectively as GFIPM metadata) about a federation user's identities, privileges, and authentication can be universally communicated.

GFIPM Benefits

Identification/Authentication

Who are the end users and how are their identities verified?

Privilege Management

What level of information access is appropriate for the user, based on such criteria as certifications, security clearances, job functions, local privileges, and organizational affiliations?

Audit

What information is needed or required for the purposes of auditing systems, systems access and use, and legal compliance of data practices?

About Global

The U.S. Department of Justice's Global Justice Information Sharing Initiative (Global) serves as a Federal Advisory Committee to the U.S. Attorney General on critical justice information sharing initiatives. Global promotes standards-based electronic information exchange to provide justice and public safety communities with timely, accurate, complete, and accessible information in a secure and trusted environment. Global is administered by the U.S. Department of Justice, Office of Justice Programs, Bureau of Justice Assistance.

For more information about Global efforts, including the GFIPM initiative and corresponding deliverables, please visit the Global Web site, <http://it.ojp.gov/GFIPM>.

This project was supported by Grant No. 2005-NC-BX-K164 awarded by the Bureau of Justice Assistance, in collaboration with the U.S. Department of Justice's Global Justice Information Sharing Initiative. The Bureau of Justice Assistance is a component of the Office of Justice Programs, which also includes the Bureau of Justice Statistics, the National Institute of Justice, the Office of Juvenile Justice and Delinquency Prevention, and the Office for Victims of Crime.
