

## Adding Information About Top Offenders

When top offenders are identified, there is often a need for additional information to assist in using the database. Some examples of information to add to the top offender database include the following:

- A photograph and summary, added to each offender’s record for reporting purposes
- The offender’s status: in jail, deceased, or otherwise incapacitated for filtering
- A master list of locations associated with each offender, including residential, business, and incident addresses
- The offender’s probation status and/or active warrants added manually or merged from another data source
- Data about crimes committed in other jurisdictions added manually or merged from another data source
